QUICK START
Generate FLUX 3 video from a preset or your own prompt
Each preset loads a written prompt plus the model, aspect ratio and length that suit it — change anything before you generate. FLUX 3 text to video, image to video, still images and music all run from the panel at the bottom of the screen.

About

Flux 3 video is an AI video generator that creates clips from text, images, references, and keyframes, with audio generated in the same pass. It runs in the browser, offers multi-shot sequences, and lets you start from a prompt, a photo, or two frames without installing software. The site says clips return in minutes, with credit-based usage instead of a subscription.

What is Flux 3 video

Flux 3 video is an AI video generator built around the FLUX 3 video model from Black Forest Labs. It is designed for users who want to generate a clip from a prompt, an

page describes it as an independent platform and notes that it is not affiliated with, endorsed by, or sponsored by Black Forest Labs.

The core promise of this AI video generator is simple: you describe the shot, choose the input mode that fits your material, and the service produces a video with sound in the same pass. The site also highlights multi-shot sequences, which means you can generate several cuts from one prompt instead of only a single static movement.

Key features

Flux 3 video focuses on flexible generation modes rather than a one-size-fits-all workflow. The AI video generator supports several input styles, and each one is meant for a different starting point.

- Text to video: start with a written prompt and generate a clip from scratch.
- Image to video: use an existing image as the visual base for motion.
- Reference-driven shots: guide the output with reference material.
- Keyframe control: provide two frames to shape the beginning and end of the clip.
- Multi-shot sequences: generate several cuts from one prompt.
- Native audio: the soundtrack is generated during the same run as the video.
- Browser-based access: no install is required.
- Credit pricing: the site says you pay with credits rather than a subscription.

The product page also claims the model reads camera language, including details such as focal length, dolly direction, and time of day. For text-first workflows, that makes the AI video generator more suitable for users who want more control over shot language than a plain prompt-to-clip tool.

How to use it

Using Flux 3 video is presented as a short browser workflow. The AI video generator is built for quick starts, but it still rewards specific prompts and clear framing.

- Open the home or studio area and choose a generation mode.
- Pick the input that matches what you have: a sentence, an image, a reference, or two

Submit the request and wait for the clip to render.

Review the result in My Creations and iterate if needed.

The site says the same prompt and seed can reproduce the same shot, which is useful when you want to refine a result one word at a time. That makes the AI video generator practical for controlled experimentation instead of one-off guessing.

Who it is for

Flux 3 video is aimed at people who need an AI video generator for concepting, creative testing, or short-form production work. It fits several use cases:

designers exploring motion concepts from still images

marketers testing product shots and social video ideas

creators who want prompt-driven cinematic clips

teams that need multi-shot sequences from one idea

users who already have a reference image or keyframes and want motion added

Because the app exposes multiple control modes, it is a better fit for users who want more than a simple text-to-video button. The AI video generator also makes sense for people who prefer browser access and credit-based usage over installing a desktop workflow.

What to know before you use it

Flux 3 video is useful, but it comes with important limits and caveats.

The site does not publish detailed pricing in the source material beyond saying it uses credits, so exact costs are unknown here.

Output quality may vary, especially with complex motion, precise character continuity, or very dense prompts.

The app is not the official Black Forest Labs service; it says it is an independent platform using the FLUX 3 name descriptively.

If you need authoritative model documentation, licensing details, or official support, check Black Forest Labs instead of relying on the app page.

For fast ideation, Flux 3 video is a strong AI video generator because it combines prompt control, keyframes, references, and sound in one browser flow. For legal, licensing, or model-source questions, use the official Black Forest Labs materials before you rely on the output commercially.

FAQ

- What is Flux 3 video?
- Is Flux 3 video free to use?
- How much does it cost?
- What can I generate with this AI video generator?
- Does Flux 3 video generate audio?
- Do I need to install anything?
- What input methods are available?
- Is Flux 3 video the official Black Forest Labs product?
- Is Flux 3 video affiliated with Black Forest Labs?
